Managed Digital Risk Protection Service
Managed Digital Risk Protection Service

In recent times we have witnessed a huge increase in phishing and Business Email Compromise (BEC), numerous high-profile supply chain attacks, and threat actors increasingly exploiting new vulnerabilities and misconfigurations. With data everywhere, companies are constantly being exposed to new digital risks, but often lack the visibility to effectively manage them. Often threats manifest not just within an organisation's boundary but across the entire digital ecosystem, including the open, deep and dark web.

The challenges organisations are facing with threat intelligence and digital risk are compounded by:

• A cyber landscape that is constantly evolving with new threat actors, tools, and techniques
• Over-reliance on a small number of people along with a shortage of specialist skills
• Difficulty in prioritising risk and allocating budget and resource accordingly
• Maximising security to successfully detect and respond to threats
• Maintaining vigilance to ensure business continuity
Integrity 360’s Threat Intelligence and Digital Risk Protection Service enables organisations to augment their existing cyber security controls by addressing the visibility gap of threats that are primarily external to their environment. Tailored and industry-specific threat information allows organisations to quickly understand and act on their external exposure and minimise digital risk.

Integrity360, in partnership with Digital Shadows, provides industry leading Threat Intelligence and Digital Risk Protection with highly-skilled and experienced security analysts, threat intelligence experts, and an award-winning SOC that together remove the upfront cost and complexity required to invest in internal tools and resource.
Primary Use Cases

Data Leakage Detection
- Marked Documents
- Customer Details
- Employee credentials

Brand Protection
- Impersonating domains
- Phishing Sites
- Spoof Social Media profiles
- Spoof Mobile apps

Attack Surface Reduction
- Exploitable vulnerabilities
- Certificate Issues
- Open ports
- Misconfigured devices

Dark Web Monitoring
- Accounts for sale
- Mentioned by Threat Actor
- Phishing kits

Threat Intelligence
- Threat actor profiles / tracking
- Intelligence Incidents
- Supplier / Vendor monitoring

Technical Leakage Detection
- Exposed Access Keys
- Unauthorised code commit
- Source code

Our Approach

1. **Configure**
   Identification of key assets. Configure an unlimited number of assets* to be monitored.

2. **Collect**
   Monitor open web, deep web, and dark web for any digital exposure of key assets.

3. **Analyse**
   Identify risk from exposure.

4. **Mitigate**
   Take action and protect:
   - Searchlight portal
   - Takedown options
   - Playbooks
   - Context
   - Enforcement

* Unlimited assets include domains, brands, company names, IP Ranges, document markings, DLP identifiers, social media pages, handles, hashtags, mobile apps and bins.
Why Choose Integrity360?

We are the leading independent cyber security services specialist operating across the UK and Ireland. Since 2005 we have earned the status of trusted security advisor for over 300 clients, including some of the largest businesses in Ireland and the UK.

Our Security First approach positions security as an enabler and empowers our clients to do business securely. We work with you as a partner, get to know you and provide tailored support coupled with advantageous commercials.

- Over 15 years’ experience in cyber security industry
- International cyber security specialists offering global capability with local presence
- Security first approach with end-to-end service delivery
- Suite of best-practice security services and solutions, addressing the full lifecycle of required security controls
- Support from a team with industry-leading qualifications and proven experience
